Their Significance for Forest Economy

Orig Pub : Tr. In-ta lesa. AN GruzSSR, 1957, 7, 3-12

Abstract : After the establishment of the Soviet power in Georgia, research was done into the forestry properties of the following principal species: eastern beech, eastern spruce, and Caucasian fir, and thereupon was ascertained the considerable sensitivity of their sprouts to early frosts and to high temperatures and the windfall capacity of these species on steep inclines. An investigation of seed reproduction in these species has made it possible to develop systems for tree felling and planting. A

study was made of the replacement of pine by deciduous species and by spruce, or spruce by deciduous species, and of oak by soft-leaved and underbrush species. The role of ground litter in draining snow and rain was investigated, as were snow-melting and the depth to which the ground freezes. A study was made of the role of the plantations of certain tree species in the fluctuations of oxygen, carbonic acid, dust, etc., of the atmosphere. Agro-engineering techniques were developed for the cultivation of the following valuable tree crops: cryptomeria, Canadian poplar, walnut, and others. Techniques were developed for restoring -- by transplanting fully-grown trees -- beech, spruce, and fir plantations which had been disrupted by tree-felling operations. A study was made of the problems of creating forest belts for use

of Mountain Forestry (Koordinatsiya nauchnykh issledovaniy po  
gornomu lesovedstvu)

PERIODICAL:

Vestnik Akademii Nauk SSSR, 1958,  
(USSR) Nr 3, pp. 59-60

ABSTRACT:

The woods of the Trans-Carpathians, the Northern Caucasus,  
the Trans-Caucasus and further mountainous regions of the  
USSR are at present intensely exploited. The development of  
a rational system of a mountain forestry by the institutes  
for scientific investigations is correlated with this. A  
conference on problems of mountain forestry was held by the  
Institute of Forestry at the AS Georgian SSR in Tbilisi in  
1953. This conference was attended by representatives of  
other institutions of scientific research of the USSR,  
amongst which was also the Institute for Forestry of AS  
USSR. A series of resolutions were adopted and the institute  
for Forestry at the AS Georgian SSR was charged with the

Card 1/2

From the AS Georgian SSR  
Coordination of the Scientific Investigations in the Field of  
Mountain Forestry

30-58-3-9/45

coordination of further scientific investigations in this field. A close contact between the individual institutions was established since then. Members of the Trans-Carpathian Forestry Experimental Station visited Georgia and its representatives visited the Trans-Carpathian station. Experiences were exchanged in this connection. Problems of artificial afforestation of the mountainous slopes, as well as problems of the acclimatization of valuable fast-growing species are investigated. The problem of the optimum age of clearings was discussed too. The publication of a voluminous work: "Dendroflora of Caucasus" was prepared in collaboration with the Botanical Institute imeni V. L. Komarov.

TITLE: Protection of the Natural Resources of the Country (Okhrana prirodnykh bogatstv strany) All-Union Conference of the Committee for Nature Conservation (Vsesoyuznoye soveshchaniye komissiy po okhrane prirody)

PERIODICAL: Vestnik Akademii nauk SSSR, 1958, Nr 9, pp. 120 - 122 (USSR)

ABSTRACT: The coordination and supervision of this work is carried out by the Komissiya po okhrane prirody Akademii nauk SSSR (Committee for Nature Preservation of the AS USSR) as well as analogue committees of the Academies of Sciences of the Union's Republics and some branch institutions of the AS USSR. The first conference took place in Tbilisi from June 18 to June 19. The following reports were heard and discussed: L.K.Shaposhnikov, Candidate of Biological Sciences spoke about the activity of the Committees for Nature Preservation and the tasks of nature preservation. V.Z.Gulisashvili, Member, Academy of Sciences, of the Georgian SSR reported on the problems of nature preservation in the mountains.

Card 1/4

Protection of the Natural Resources of the Country. All-Union Conference of the Committee for Nature Conservation SOV/30-58-9-47/51

V.S.Pokrovskiy, Candidate of Biological Sciences dealt with the problem of protection of the fauna.

The Verkhovnyy Sovet Estonii (Supreme Soviet of Estonia) (in June 1957), and the Supreme Soviet of Armenia (in May 1958) passed bills for nature preservation which are in force in the Republic. The Council of Ministers of the Lithuanian SSR established a Committee for Nature Preservation and the Council of Ministers of the Estonian SSR ~~an~~ Administration for Nature Preservation.

In the Councils of Ministers of the Latvian and Ukrainian SSR teams were formed who deal with the problem of nature preservation. The TsK KP Ukrayiny i Soviet Ministrov USSR (Central Committee of the Communist Party of the Ukraine and the Council of Ministers of the Ukr SSR) issued a joint decree concerning measures for the improvement of nature preservation. The Soviet Ministrov Azerbaydzhanskoy SSR (Council of Ministers of the Azerbaydzhan SSR) decided to organize a network of National Parks on the territory of the Republic. In the years 1957 - 1958 the following number of National Parks

Card 2/4

Protection of the Natural Resources of the Country. All- SOV/30-58-9-47/51  
Union Conference of the Committee for Nature Conservation

was established: 8 in Georgia, 4 in Estonia, 4 in Latvia,  
4 in the RSFSR, 3 in Azerbaydzhan, 1 in Belorussia, and 1  
in Kazakhstan. A series of measures for the future was de-  
cided upon. Between 1959 and 1960 an Institut okhrany pri-  
rody (Institute for Nature Preservation) is to be founded.  
Problems of Nature Preservation are to be included in the  
teaching programs of schools.

TITLE: The Alpine Limits of Wood Vegetation in the Caucasus in Connection With Soil-Climatic Conditions (Al'piyskaya granitsa drevesnoy rastitel'nosti na Kavkaze v svyazi s pochvenno-klimaticeskimi usloviyami)

PERIODICAL: Izvestiya Vsesoyuznogo Geograficheskogo Obshchestva, 1958, Vol 90, Nr 2, pp 158-163 (USSR)

ABSTRACT: The Alpine limits of wood vegetation on the northern and southern slopes of the Caucasus are being investigated and compared to other mountain areas. Table 1 presents data on the altitude limits of wood vegetation, tree species, soil and climatic conditions in various parts of the Caucasus. Wood vegetation limits under humid oceanic climatic conditions correspond to July isotherms over 10°. It was stated that alpine wood limits in the Caucasus are between 2,050 and 2,700 m altitude. They depend on the humidity of the climate and on the height of mountain peaks. The article contains 3 tables, and 13 references, 5 of which are Soviet and 8 German.

TITLE: A Comparison of the Scraper and Sifter Methods for Delivery  
at the Tekeli Mine (Sravneniye skrepernoy i grokhotnoy  
skhem dostavki na rudnike Tekeli)

PERIODICAL: Gornyy zhurnal, 1958, Nr 10, pp 11-13 (USSR)

ABSTRACT: Research conducted by the authors showed that, under the  
conditions of the Tekeli Mine, where the mining is done by  
the level caving-in system, the sifter scheme of ore de-  
livery must be preferred to the scraper method. Even though  
the cost of installation of the sifter method is 80% higher  
than that of scraper method, it is more advantageous because  
its productivity is 45% higher. The sifter method also has  
a lower safety factor than the scraper method. There are 3  
tables.

TOPIC TAGS: wind, wind direction, wind direction instrument, wind  
measurement, wind meter

ABSTRACT: An Author Certificate has been issued for a device for the automatic measurement of mean wind direction. The device consists of a wind-direction sensor, a servosystem with synchro control, an electromagnetic clutch, a reduction gearing, a time relay, and scales for instantaneous and mean wind direction. To make it possible to increase the averaging-time interval, the device is equipped with a synchro for setting the mean wind-direction scale at the instantaneous wind-direction value prior to averaging, through periodic connection of the relay to the mean wind-direction scale. The device is also equipped with an electromechanical unit for comparing instantaneous wind-

TITLE: Crystallization of selenium

PERIODICAL: Referativnyy zhurnal. Khimiya, no. 19, 196<sup>4</sup>, 35, abstract  
19B260 (Tr. In-ta fiz. AN Azerb. SSR, v. 10, 1960, 22 - 24)

TEXT: This paper presents the results of attempts to determine the portion of crystalline selenium in amorphous selenium. By means of the radioisotope

Se<sup>75</sup> it has been shown that even rapidly cooled amorphous selenium remains partially crystalline and that the crystalline portion increases with the cooling period. The method for determining crystalline selenium in amorphous Se is based on the different solubilities of crystalline and amorphous Se in concentrated HNO<sub>3</sub>. AUTHOR: Gulyev, M. A. 44, 45

TITLE: Electric simulation of nonstationary two dimensional axially symmetrical fields  
21, 44, 45

SOURCE: AN AzerbSSR. Izvestiya. Seriya fiziko-tehnicheskikh i matematicheskikh nauk, no. 2, 1965, 93-96

TOPIC TAGS: electric analog, hydrodynamics, pressure simulation, simulation test

ABSTRACT: The article deals with problems involved in electric simulation of a nonstationary hydrodynamic axially symmetrical field and with an approximate solution of the simulated problem. A cylindrical layer with penetrability K and thickness h is considered, covered with clay having parameters  $K_c$  and  $h_c$ . In the center of the layer there is a circular hole cut through the entire thickness. A constant pressure is maintained over the clay cover. The problem is to determine the pressure at any point in the cylindrical system in question. This is done by breaking up the system into sectors and simulating each elementary curvilinear parallelopiped by radially and longitudinally arranged resistances. The elasticities of the layer, the liquid, and the clay are simulated by means of capacitors connected

Card 1/2

L 4540-66

ACCESSION NR: AP5020180

between the nodes of the resistance grid. An analysis of the corresponding hydrodynamic and electric equations shows that for a detailed investigation of the section of the region near the hole it is advantageous to use variable spacing in the radial direction. Spacing in the form of a geometrical progression is convenient. The approximate solution is quite simple and yields results that are accurate to 9%. Orig. art. has: 1 figure and 12 formulas.

Title : Polarization of Neutrons Scattered by Carbon, With Allowance for Nuclear Volume Into Account.

Orig Pub : Zh. eksperim. i teor. fiziki, 1956, 31, No 1, 144-146

Abstract : The polarization of neutrons of high energy (approximately 300 Mev) when scattered by carbon is calculated. The interaction potential neutron-nucleus is found from the solution of the equation

Card 1/3

USSR/Nuclear Physics

C-5

Abs Jour : Ref Zhur - Fizika, No 5, 1957, 11209

$$(\nabla^2 - K^2) \rho = -4\pi\rho,$$

$$\rho = \begin{cases} \rho_0 & r \leq R_0 \\ \rho_0 (R_0/r)^{\frac{1}{2}} e^{-a(r-R_0)} & r \geq R_0 \end{cases}$$

which describes the meson field in the nucleus ( $\rho$  is nucleon density). The interaction potential is taken to be

$$2P(1+iS_z + (a/2)(\vec{S} \cdot \vec{P})),$$

where  $g$ ,  $\varepsilon$ , and  $a$  are constants, while  $S$  and  $P$  are the operators of spin and orbital momentum of the neutron.

Card 2/3

USSR/Nuclear Physics

C-5

Abs Jour : Ref Zhur - Fizika, No 5, 1957, 11209

The neutron polarization calculated with this potential is in good agreement with that experimentally measured (the comparison is made in the angle range from 5 to 30°). Calculation of the scattering amplitude of the neutrons was carried out in the quasi-classical approximation for the following values of the parameters:

$a = (15/2) (\hbar/mc)^2$ ,  $R_0 = 1.602 \times 10^{-13}$  cm,  $\alpha = 0.68 \times 10^{-13}$  cm,  $k_0 = 0.675 \times 10^{13}$  cm $^{-1}$ ,  $\epsilon = 1$ ,  $g = 3e -- 5e$ .

Reducing the magnitude of  $\epsilon$  causes poor agreement with experiment.
